

Russia Recommendations

1. Sea of Okhotsk Region (ECS ID-100, 110)

Russia received recommendations for the Sea of Okhotsk region. The Sea of Okhotsk is a shallow sea (300-1400m) located between the Kamchatka Peninsula and the mainland of Russia. The area of extended continental shelf, known as the enclave is in the centre of the sea. Five FOS points, based on morphology, are located to the south of the enclave. These FOS points are in water depths of 200-3000 m and extend along the northern edge of the Kuril Basin. The enclave is landward of the 2500 m isobath and within 350 NM from the baseline

3D image of the seabed of the Sea of Okhotsk. The extended continental shelf in the area beyond 200 nautical miles in the area of the enclave, outlined in red. Yellow dots show the location of the foot of the continental slope (from the revised Russian Executive Summary part 1. 2013).
